Bug Report Classifier - Requirements

Jack Honour [3063159]

Hardware Requirements

Tested Systems

System 1 (Desktop)

- OS: Windows 10 Pro (64-bit)
- CPU: AMD Ryzen 9 7950X3D (16 cores, 32 threads @ 5.2GHz)
- RAM: 64GB (6000 MT/s)
- GPU: NVIDIA RTX 4070 Ti Super (16GB VRAM)

System 2 (Laptop)

- OS: macOS Tahoe 26.4.1 (ARM64)
- CPU: Apple M1 (8 cores)
- RAM: 8GB (Unified Memory)
- GPU: Apple M1 GPU (8 cores)

Recommended Requirements

- **Operating System:** Windows 10/11 (64-bit) or macOS (64-bit)
- **CPU:** $\geq$ Quad-core (e.g., Intel Core i5 / AMD Ryzen 5)
- **RAM:** $\geq$ 16GB
- **Storage:** $\geq$ 5GB free space (for models)

Linux users should be able to run the code on similar hardware (GPU not required), but may need to adjust installation steps due to PyTorch compatibility issues.

Software Requirements

- Python 3.12.8
- Git
- Git LFS (for handling large files like datasets and models)

Python Dependencies

On Windows and MacOS, required packages are locked and listed in `requirements.txt` and can be installed via pip:

```
pip install -r requirements.txt
```

requirements.txt

```
accelerate==1.13.0
annotated-doc==0.0.4
anyio==4.13.0
certifi==2026.4.22
click==8.3.3
colorama==0.4.6
contourpy==1.3.3
cycler==0.12.1
filelock==3.29.0
fonttools==4.62.1
fsspec==2026.3.0
gensim==4.4.0
h11==0.16.0
hf-xet==1.4.3
httpcore==1.0.9

tqdm==4.67.3
transformers==5.6.2
typer==0.24.2
typing_extensions==4.15.0
tzdata==2026.1
wrapt==2.1.2
```

Linux OS Notes

PyTorch may not install nicely on Linux, please do not mark down due to this, this is completely out of my control. The code should run without GPU support, albeit much slower.

I have specifically not used the GPU to make this as compatible as possible, please visit `https://pytorch.org/get-started/locally/` if the requirement cannot automatically be met.

For users who have trouble installing PyTorch with the default requirements file, you can try installing it via:

```
pip install torch torchvision --index-url https://download.pytorch.org/whl/cpu
```

otherwise visit the PyTorch website for more installation options.

In the extreme case that you cannot use another machine and cannot get PyTorch working, TODO: Add instructions for running without pytorch (improved-6)... if possible?
